

styrod

NEW with system drawer
featuring flexible partitioning

The long-established, successful storage and sorting system styrod has now been expanded to include a system drawer featuring flexible partitioning. Partitioning elements can be used to subdivide the drawer individually into compartments of different sizes, thereby improving tidiness and organisation on a day-to-day basis.

The closed drawers provide protected storage for documents up to A4 size or for a whole range of smaller sized items. The highlight of the drawer is that it can be subdivided into compartments of varying sizes by means of dividers. This individual partitioning function allows tidy storage of all kinds of small items, whether in the office or at home. Office supplies, IT accessories, coffee cap-

sules, screws, craft materials, cosmetics, jewellery – there are no limits to the potential uses of the styrod drawer. The timeless, elegant styrod system provides a perfect fit in any setting and can also be expanded at any time.

The drawers are now available as a SET in combination with the proven styrod storage system. For those wishing to expand their existing system, individual drawers can also be purchased in the colours black, white and blue. The partitioning elements are also available separately for expanded subdivision.

Like all styro products, these items are 100% Swiss made and produced at the Spichtig Ltd. plastics plant in Steinen.
